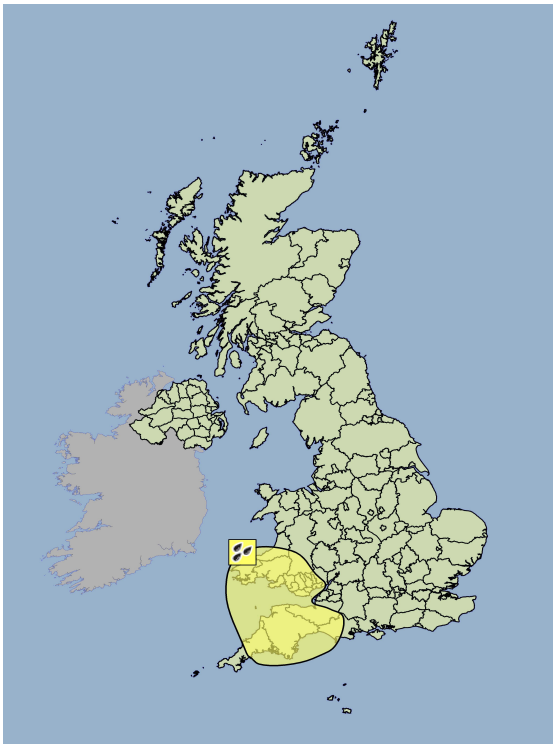
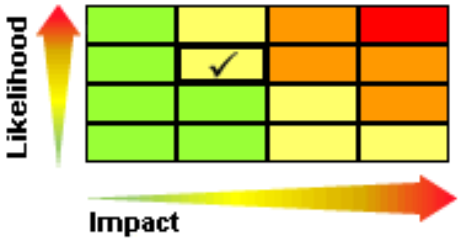
National Severe Weather Warning Service





Chief Forecasters Assessment
Another active Atlantic frontal system will move eastwards across the UK during Sunday night and Monday morning. A combination of strong winds and very moist air will give locally significant rainfall accumulations over south facing coasts and upslopes. The wind and rain should clear eastwards later Monday morning.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Mon, 30th Dec 2013** until **10:00 on Mon, 30th Dec 2013**

Further rain, heavy at times, will spread quickly eastwards across southwest England and south Wales on Sunday night and into Monday morning. Rainfall totals are expected to be widely 15-30 mm, but locally 50 mm over south facing hills.

With ground already saturated over much of this region, the public should be aware of the risk of further localised flooding. Gales will accompany this rain (see separate Warning).

This is a further update to the Alert first issued on Friday.
